We see on the internet a war of numbers, who will have the most fans or views, but these numbers are very often biased compared to reality and what they represent.

Often million, it make us believe that to succeed we must reach hundreds of thousands of people but it is absolutely not the case, much less a necessity if you are a small business neighborhood.

We see often that propose to touch 10,000 households with 23,800 people not impresses as a few years ago.

We must be realistic, imaging this number and note that during a hockey game at the Bell Centre, there are 21 000 people.

So instead of thinking touching 23 800 people, imagine yourself touching the Bell Centre and more filled during a match, and that each person can have your ad in hand, it's huge!

You can choose to place your ad in one or more areas in the map below.

We are constantly evolving, so even if your neighborhood is not in the map, please contact us.
